

# SHEPHERD TRACK

## Asset and Inventory Tracking Software

---

**Shepherd Track – Asset and Inventory Tracking Designed for the Real World**

**Most tracking systems require you to go through a lengthy design process before you can even begin to use them. Shepherd Track is designed to be installed and used immediately.**

---

### **System Features:**

- Multiple warehouse inventory in one or more databases
- Network and Multi-User out of the box (no additional license fees)
- Compatible with most portable/batch and fixed barcode scanners
- Easily integrated with Barcode creation software
- Restock alerts (based on quantity levels set by the user)
- Detailed history tracking
- Useful Reports including Restock, On-Hand Inventory, and History
- Free Technical Support by web or email

### **Included Customization Features:**

- Rename system fields to fit your business needs
- Track information in 5 additional user-defined fields
- Custom programming to create additional reports is available upon request

### **System Requirements:**

- Windows 98, NT, 2000, XP
- Pentium 166 (500MHz or better recommended)
- 64MB RAM
- 10MB Disk Space and a CD-Rom to install, additional space as required by your specific tracking needs (recommend 100MB)
- A functional network for multi-user (Microsoft or Novell)

### **Additional Modules Available:**

- Public Warehouse Billing Module – for charges associated with handling and storage of inventory items
- PalmOS Batch Entry Module (for Symbol PDT1500/1700/1800 and other Palm-based data collectors)
- Pick Module – for order tracking and pick list generation
- Additional modules can be developed upon request
